(Based on VPAT® Version 2.4)

### Name of Product/Version:

VEuPathDB websites, Build 48

### Product Description:

This VPAT® refers to the VEuPathDB.org websites (AmoebaDB, CryptoDB, FungiDB, GiardiaDB, HostDB, MicrosporidiaDB, OrthoMCL, PiroplasmaDB, PlasmoDB, ToxoDB, TrichDB, TriTrypDB, VectorBase and VEuPathDB), which share one software infrastructure. In all cases, the user interacts with the websites to mine scientific data and run analyses on the data. The websites provide a “user workspace” where users are able to store their results. The accessibility requirements listed in this template apply to the user interface to mine, analyze and manage user data in all the websites.

### Notes:

Because our products are websites (“web” products), conformant to Section 508:

- Section 508 Chapter 4 Hardware has been removed.
- Section 508 Chapter 5 Software has been removed.
- WCAG Level AAA table has been removed because the product is not being evaluated for this level at this time.

Our software infrastructure comprises a client-side react-based (javascript) architecture and an open REST API backend. The new BRC VEuPathDB is working towards empowering users with interoperability with third party websites, such as Galaxy, Apollo and Cyverse; we will be collaborating with these third-party tools to ensure our users a fully accessible experience.

### Evaluation Methods Used:

Our testing for accessibility includes:

- Algorithmic automated tests such as: The WebAIM Web Accessibility Evaluation Tool (WAVE) (<https://wave.webaim.org>),

- Human judgement tests (visual inspection and manual operation): using the site using a keyboard and turning off css and images.
- Testing with assistive technology by people with and without disabilities, such as VoiceOver and ChromeVox.
